

B. Sc. Artificial Intelligence and Machine Learning

Syllabus

AFFILIATED COLLEGES

Program Code:***

2025 - 2026 and onwards

BHARATHIAR UNIVERSITY

(A State University, Accredited with “A” Grade by
NAAC, Ranked 13th among Indian Universities by
MHRD-NIRF,

World Ranking: **Times-801-1000, Shanghai-901-1000, URAP-982)**
Coimbatore – 641 046, Tamil Nadu, India

Programme Educational Objectives(PEOs)	
The B. Sc. Artificial Intelligence and Machine Learning programme describe accomplishments that graduates are expected to attain within five to seven years after graduation	
PEO1	Expertized with the principles of Artificial Intelligence and problem solving, inference, perception, knowledge representation, and learning
PEO2	Exhibit high standards with regard to application of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models
PEO3	Investigate with a machine learning model for simulation and analysis and explore the scope, potential, limitations, and implications of intelligent systems.

Programme Specific Outcomes (PSOs)	
After the successful completion of B. Sc. Artificial Intelligence and Machine Learning programme the students are expected to	
PSO1	Exhibit good domain knowledge and completes the assigned responsibilities effectively and efficiently in par with the expected quality standards for Artificial Intelligence and Machine Learning professional
PSO2	Apply the technical and critical thinking skills in the discipline of artificial Intelligence and machine learning to find solutions for complex problems.
PSO3	Design and develop research-based solutions for complex problems in artificial intelligence and machine learning industry through appropriate consideration for the Public health, safety, cultural, societal, and environmental concerns.
PSO4	Establish the ability to Listen, read, proficiently communicate and articulate complex Ideas with respect to the needs and abilities of diverse audiences.
PSO5	Provide innovative ideas to instigate new business ventures in the hospitality industry

Programme Outcomes (POs)	
On successful completion of the B. Sc. Artificial Intelligence and Machine Learning	
PO1	Exhibit good domain knowledge and completes the assigned responsibilities Effectively and efficiently in par with the expected quality standards.
PO2	Apply analytical and critical thinking to identify, formulate, analyze, and solve Complex problems in order to reach authenticated conclusions
PO3	Design and develop research based solutions for complex problems with specified needs through appropriate consideration for the public health, safety, cultural, societal, And environmental concerns.
PO4	Establish the ability to Listen, read, proficiently communicate and articulate Complex ideas with respect to the needs and abilities of diverse audiences.
PO5	Deliver innovative ideas to instigate new business ventures and possess the Qualities of a good entrepreneur
PO6	Acquire the qualities of a good leader and engage in efficient decision making.
PO7	Graduates will be able to undertake any responsibility as an individual/member of Multidisciplinary teams and have an understanding of team leadership
PO8	Function as socially responsible individual with ethical values and accountable to ethically validate any actions or decisions before proceeding and actively contribute to the societal concerns.
PO9	Identify and address own educational needs in a changing world in ways sufficient To maintain the competence and to allow them to contribute to the advancement of knowledge
PO10	Demonstrate knowledge and understanding of management principles and apply The set one own work to manage projects and in multidisciplinary environment.

BHARATHIAR UNIVERSITY::COIMBATORE 641046

B. Sc. Artificial Intelligence and Machine Learning (CBCS PATTERN)
(For the students admitted during the academic year 2025 - 2026 and onwards)

Scheme of Examination

Part	Title of the Course	Hours/ Week	Examination				Credits
			Duration In Hours	Maximum Marks			
				CIA	CEE	Total	
	Semester I						
I	Language-I	6	3	25	75	100	4
II	English-I	4	3	25	75	100	4
III	Core 1: Object Oriented Programming in C++	5	3	25	75	100	4
III	Core 2:Data Structures	5	3	25	75	100	4
III	Core Lab 1: Programming Lab–C++	4	3	20	30	50	2
III	Allied 1: Discrete Mathematics	4	3	25	75	100	4
IV	Environmental Studies*	2	3	-	50	50	2

First Semester

Course Code		Object Oriented Programming in C++	L	T	P	C
Core/elective/Supportive		Core:1	5	0	0	4
Pre-requisite		- Basic knowledge of Procedure Oriented Programming concepts - Basic knowledge in C Programming	Syllabus version		2023-26 Batch	
Course Objectives						
To introduce the concepts of Object Oriented Programming Paradigm and the programming constructs of C++						
Expected Course Outcomes						
1	Describe the procedural and object oriented paradigm with concepts of streams, classes, functions, data and objects					K1
2	Demonstrate the various basic programming constructs like decision making statements. Looping statements and functions					K2
3	Explain the object oriented concepts like overloading, inheritance, polymorphism, virtual functions, constructors and destructors					K3
4	Explain the various file stream classes; file types,usage of templates and exception handling mechanisms.					K3
5	Compare the pros and cons of procedure oriented language with the concepts of object oriented language					K5
6	Develop programs incorporating the programming constructs of object oriented programming concepts					K5
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT-I						
INTRODUCTION						12 Hours
Introduction to C++- key concepts of Object-Oriented Programming–Advantages– Object Oriented Languages–I/O in C++- C++ Declarations. Control Structures:-Decision Making and Statements: If ...else,jump, goto,break,continue,Switchcase statements-Loops in C++:for,while,do-functionsinC++- inline functions–Function Overloading.						
UNIT II						
CLASSES AND OBJECTS						12 Hours
Classes and Objects: Declaring Objects–Defining Member Functions–Static Member variables and functions– array of objects–friend functions–Overloading member functions–Bit fields and classes –Constructor and destructor with static members.						
UNIT-III						
OPERATOR OVERLOADING						12 Hours
Operator Overloading: Overloading unary, binary operators–Overloading Friend functions–type conversion–Inheritance: Types of Inheritance–Single,Multilevel,Multiple,Hierarchal,Hybrid,Multipath inheritance–Virtual base Classes–Abstract Classes.						

UNIT-IV		POINTERS	12 Hours
Pointers–Declaration–Pointer to Class, Object–this pointer–Pointers to derived classes and Base classes–Arrays–Characteristics–array of classes–Memory models–new and delete operators–Dynamic object–Binding, Polymorphism and Virtual Functions.			
UNIT-V		FILE STREAM CLASSES	12 Hours
Files–File stream classes–file modes–Sequential Read/Write operations–Binary and ASCII Files–Random Access Operation–Templates–Exception Handling–String–Declaring and Initializing string objects–String Attributes–Miscellaneous functions.			
Total Lecture Hours			60 Hours

Course Code		Programming in Lab C++	L	T	P	C
Core/elective/Supportive		CoreLab:1	-	-	4	4
Pre-requisite		- Basic knowledge of Procedure Oriented Programming concepts - Basic knowledge in C Programming	Syllabus version		2023-26 Batch	
Course Objectives						
To introduce the concepts of Object-Oriented Programming Paradigm and the programming constructs of C++						
Expected Course Outcomes						
1	Apply the various basic programming constructs like decision making statements. Looping statements, functions, concepts like overloading, inheritance, polymorphism, virtual functions, constructors and destructors					K3
2	Illustrate the concept of Virtual Classes, inline functions and friend functions					K4
3	Compare the various file stream classes; file types, usage of templates and exception handling mechanisms.					K5
4	Compare the pros and cons of procedure oriented language with the concepts of object oriented language					K5
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
PROGRAM-1						3
Write a C++ Program to create a class to implement the data structure STACK. Write a constructor to initialize the TOP of the STACK. Write a member function PUSH () to insert an element and member function POP () to delete an element check for overflow and underflow conditions.						
PROGRAM-2						3
Write a C++ Program to create a class ARITHMETIC which consists of a FLOAT and an INTEGER variable. Write member functions ADD (), SUB (), MUL (), DIV () to perform addition, subtraction, multiplication, division respectively. Write a member function to get and display values.						
PROGRAM-3						3
Write a C++ Program to read an integer number and find the sum of all the digits until it reduces to a single digit using constructors, destructors and inline member functions.						
PROGRAM-4						3
Write a C++ Program to create a class FLOAT that contains one float data member. Overload all the four Arithmetic operators so that they operate on the object FLOAT.						
PROGRAM-5						3
Write a C++ Program to create a class STRING. Write a Member Function to initialize, get and display strings. Overload the operators ++ and == to concatenate two Strings and to compare two strings respectively.						

PROGRAM-6		4
Write a C++ Program to create class, which consists of EMPLOYEE Detail like E_Number,E_Name,Department,Basic,Salary,Grade. Write a member function to get and display them. Derive a class PAY from the above class and write a member function to calculate DA, HRA and PF depending on the grade.		
PROGRAM-7		5
Write a C++ Program to create a class SHAPE which consists of two VIRTUAL FUNCTIONS Calculate_Area () and Calculate_Perimeter () to calculate area and perimeter of various figures. Derive Three classes SQUARE,RECTANGLE,TRIANGE from class Shape and Calculate Area and Perimeter of each class separately and display the result.		
PROGRAM-8		3
Write a C++ Program to create two classes each class consists of two private variables, a integer and afloat variable. Write member functions to get and display them. Write a FRIEND Function common to both classes, which takes the object of above two classes as arguments and the integer and float values Of both objects separately and display the result.		
PROGRAM-9		3
Write a C++ Program using Function Overloading to read two Matrices of different Data Types such as integers and floating point numbers. Find out the sum of the above two matrices separately and display the sum Of these arrays individually.		
PROGRAM-10		5
Write a C++ Program to check whether the given string is a palindrome or not using Pointers.		
PROGRAM-11		5
Write a C++ Program to create a File and to display the contents of that file with line numbers.		
PROGRAM-12		5
Write a C++ Program to merge two files into a single file.		
Total Hours		45 Hours

Course Code		Data Structures	L	T	P	C
Core/elective/Supportive		Core:2	5	0	-	4
Pre-requisite		Basic knowledge of Programming Constructs	Syllabus version		2023-26 Batch	
Course Objectives						
- To introduce the concept of data structures and the types of data structures - To demonstrate how various data structures can be implemented and used in various applications						
Expected Course Outcomes						
1	Define the concept of Data structure and list the various classifications of data structures.					K1
2	Demonstrate how arrays,stacks,queues,linked lists,trees,heaps,Graphs and Hash Tables are represented in the main memory and various operations are performed on Those data structures.					K2
3	Illustrate the various file organizations like Sequential, Random and Linked organizations.					K2
4	Discover the real time applications of the various data structures					K3
5	Design algorithms for various sorting and searching techniques					K4
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
						
UNIT I	INTRODUCTION					12 Hours
Introduction: Introduction of Algorithms, Analyzing Algorithms. Arrays: Sparse Matrices- Representation of Arrays. Stacks and Queues. Fundamentals-Evaluation of Expression Infix to Postfix Conversion –Multiple Stacks and Queues						
UNIT II	LINKED LIST					12Hour S
Linked List: Singly Linked List - Linked Stacks and Queues - Polynomial Addition - More on Linked Lists –Sparse Matrices- Doubly Linked List and Dynamic-Storage Management- Garbage Collection and Compaction.						
UNIT III	NON LINEAR DATA STRUCTURES					12 Hours
Trees: Basic Terminology-Binary Trees-Binary Tree Representations-Binary Trees-Traversal-More on Binary Trees-Threaded Binary Trees-Binary Tree Representation of Trees- Counting Binary Trees. Graphs: Terminology and Representations-Traversals, Connected Components and Spanning Trees, Shortest Paths and Transitive Closure						
UNIT IV	EXTERNAL – SORTING					12 Hours
External Sorting: Storage Devices -Sorting with Disks: K-Way Merging - Sorting with Tapes Symbol Tables: Static Tree Tables – Dynamic Tree Tables- Hash Tables: Hashing Functions- Overflow Handling.						

UNIT V	INTERNAL - SORTING	12 Hours
Internal Sorting: Insertion Sort- Quick Sort-2Way Merge Sort-Heap Sort-Shell Sort-Sorting on Several Keys. Files: Files, Queries and Sequential organizations-Index Techniques-File Organizations.		
Total Lecture Hours		60 Hours

*S - Strong ; M - Medium; L- Low

Course Code		Discrete Mathematics	L	T	P	C
Core/elective/Supportive		Allied : 1	4	-	-	4
Pre-requisite		Basic knowledge in Mathematics	Syllabus version	2025-26 Batch		
Course Objectives						
- Introduce students to the techniques, algorithms, and reasoning processes involved in the study of discrete mathematical structures. - Introduce students to set theory, inductive reasoning, elementary and advanced counting techniques, equivalence relations, recurrence relations, graphs, and trees. - Introduce students to prove mathematical statements by means of inductive reasoning						
Expected CourseOutcomes						
1	Understand discrete mathematical preliminaries and apply discrete mathematics informa representation of various computing constructs					K1
2	Demonstrate an understanding of relations, functions, Combinatorics and lattices					K2
3	Apply the techniques of discrete structures and logical reasoning to solve a variety of problems and write an argument using logical notation					K3
4	Analyze and construct mathematical arguments that relate to the study of discrete structures					K3
5	Develop and model problems with the concepts and techniques of discrete mathematics.					K5
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	MATHEMATICAL LOGIC					15
Proposition–Logical Operators–Truth Tables–Laws of Logic–Equivalences–Rules of interface–validity Arguments–Consistency of Specifications–Propositional Calculus– Quantifiers and universe of discourse						
UNIT II	PROOF TECHNIQUES					19
Introduction–Methods of proving theorems–Direct Proofs, Proof by Contraposition, Vacuous and trivial proofs, Proofs by contradiction–Mistakes in Proofs–Mathematical induction–Strong Mathematical induction–Strong mathematical induction and well ordering–Program Correctness.						
UNIT III	COMBINATORICS					14
Basics of Counting–The Pigeon hole principle–Permutations and Combinations with and without repetition, Permutations with indistinguishable elements– distributions of objects–Generating Permutations and combinations in lexicographic order.						
UNIT IV	RECURRENCE RELATIONS					14
Some Recurrence Relation Models–Solution of linear homogeneous recurrence relations with constant coefficients–solution of linear non- homogeneous recurrence relations by the method of Characteristic roots–Divide and conquer recurrence relations.						
UNIT V	LATTICES					13

Lattices as partially ordered set–Properties of Lattices–Lattices as algebraic system–Sub lattices– Direct Product and Homomorphism–Some special lattices

Second Semester

Course Code		Java Programming	L	T	P	C
Core/elective/Supportive		Core:3	5	0	-	4
Pre-requisite		- Basic knowledge of Programming Constructs. - Knowledge on Object Oriented Programming Concepts.	Syllabus version		2023-26 Batch	
Course Objectives						
To introduce the concepts of Object Oriented Programming Paradigm and the programming constructs of JAVA						
Expected Course Outcomes						
1	Recite the history of JAVA and its evolution					K1
2	Explain the various programming language constructs, object oriented concepts like overloading, inheritance, polymorphism, Interfaces, threads, exception handling and packages					K2
3	Illustrate the concepts of Applets, files and the concept of stream classes.					K3
4	Outline the benefits and applications of objects oriented programming concepts and defend how JAVA differs from other programming languages					K3
5	Judge the pros and cons of other object oriented language with the concepts of JAVA					K4
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I		Fundamentals of OOP				16
Fundamentals of Object-Oriented Programming: Object-Oriented Paradigm – Basic Concepts of Object-Oriented Programming– Benefits of Object-Oriented Programming–Application of Object-Oriented Programming. Java Evolution: History–Features–How Java differs from C and C++ – Java and Internet–Java and www–Web Browsers. Overview of Java: simple Java program–Structure– Java Tokens–Statements–Java Virtual Machine.						
UNIT II		Variables & Control Structures				15
Constants, Variables, Data Types-Operators and Expressions–Decision Making and Branching: if, if...else, nested if, switch?: Operator- Decision Making and Looping: while, do, for–Jumps in Loops -Labeled Loops–Classes, Objects and Methods.						
UNIT III		Arrays & Classes				14
Arrays, Strings and Vectors–Interfaces: Multiple Inheritance–Packages: Putting Classes together–Multithreaded Programming.						
UNIT IV		Error Handling & Graphics				13
Managing Errors and Exceptions–Applet Programming–Graphics Programming.						
UNIT V		I/O Streams				17
Managing Input/Output Files in Java: Concepts of Streams-Stream Classes–Byte Stream classes–Character stream classes–Using streams–I/O Classes–File Class–I/O exceptions–Creation of Files –Reading/Writing characters, Byte-Handling Primitive Data Types–Random Access Files.

Course Code		Programming Lab - JAVA	L	T	P	C
Core/elective/Supportive		Core Lab:2	-	-	4	2
Pre-requisite		- Basic knowledge of Programming - Constructs - Knowledge on Object Oriented Programming Concepts	Syllabus version		2023-26 Batch	
Course Objectives						
To introduce the concepts of Object Oriented Programming Paradigm and the programming constructs of JAVA						
Expected Course Outcomes						
1	Apply the various basic programming constructs of JAVA like decision making statements. Looping statements, overloading, inheritance, polymorphism, constructors And destructors					K3
2	Illustrate the concepts of threading and multi-threading					K4
3	Design programs using various file stream classes; file types, and frames					K4
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
PROGRAM 1						
Write a Java Applications to extract a portion of a character string and print the extracted string.						3
PROGRAM 2						
Write a Java Program to implement the concept of multiple inheritance using Interfaces.						3
PROGRAM 3						
Write a Java Program to create an Exception called payout-of-bounds and throw the exception						3
PROGRAM 4						
Write a Java Program to implement the concept of multithreading with the use of any three multiplication tables and assign three different priorities to them.						3
PROGRAM 5						
Write a Java Program to draw several shapes in the created windows						6
PROGRAM 6						
Write a Java Program to create a frame with four text fields name, street, city and pin code with suitable tables. Also add a button called my details. When the button is click edits corresponding Values are to be appeared in the text fields.						6
PROGRAM 7						
Write a Java Program to demonstrate the Multiple Selection List-box.						6
PROGRAM 8						
Write a Java Program to create a frame with three text fields for name, age and qualification and a text field for multiple line for address						6
PROGRAM 9						
Write a Java Program to create Menu Bars and pull down menus.						6
PROGRAM 10						
Write a Java Program to create frames which respond to the mouse clicks. For each events with mouse such as mouse up, mouse down, etc., the corresponding message to be displayed.						6

PROGRAM 11		6
Write a Java Program to draw circle, square, ellipse and rectangle at the mouse click positions.		
PROGRAM 12		6
Write a Java Program which open an existing file and append text to that file.

CO3	S	S	S	L	L	L	L	L	L	L

*S - Strong ; M - Medium; L- Low

Course Code		Internet Basics Laboratory	L	T	P	C
Core/elective/Supportive		Core Lab: 3	-	0	3	2
Pre-requisite		Basic knowledge in Computers	Syllabus		2023-26 Batch	
Course Objectives						
1. Introduce the fundamentals of Internet and the Web functions.						
2. Impart knowledge and essential skills necessary to use the internet and its various components.						
3. Find, evaluate, and use online information resources.						
4. Use Google Apps for education effectively.						
Expected Course Outcomes						
1	Apply the predefined procedures to create Gmail account, check and receive messages					K3
2	Apply the predefined procedures to perform various basic operations on internet					K3
3	Utilize various Google applications like docs, Google classroom, Google drive, Google forms, Google meet and slides					K3
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
PROGRAM-1						2
Create an email account in Gmail. Using the account created compose a mail to invite other college students for your college fest, enclose the invitation as attachment and send the mail to at least 50 recipients. Use CC and BCC options accordingly						
PROGRAM-2						2
Open your inbox in the Gmail account created, check the mail received from your peer from other college inviting you for his college fest, and download the invitation. Reply to the mail with a thank you note for the invite and forward the mail to other friends						
PROGRAM-3						2
Assume that you are studying in final year of your graduation and are eagerly looking for a job. Visit any job portal and upload your resume.						
PROGRAM-4						2
Create a meeting using Google calendar and share meeting id to the attendees. Transfer the ownership to the Manager once the meeting id is generated.						
PROGRAM-5						2
Create a label and upload bulk contacts using import option in Google Contacts						
PROGRAM-6						2
Create your own Google classroom and invite all your friends through email id. Post study material in Google classroom using Google drive. Create a separate folder for every subject and upload all unit wise E-Content Materials.						
PROGRAM-7						2
Create and share a folder in Google Drive using _share a link ‘option and set the permission to access that folder by your friends only.						
PROGRAM-8						2
Create one-page story in your mother tongue by using voice recognition facility of Google Docs						

PROGRAM-9		2
Create a registration form for your Department Seminar or Conference using Google Forms.		
PROGRAM-10		2
Create a question paper with multiple choice types of questions for a subject of your choice, using Google Forms.		
PROGRAM-11		2
Create a meet using Google Calendar and record the meet using Google Meet. Create a Google slides for a topic and share the same with your friends.		
PROGRAM-12		4
Create template for a seminar certificate using Google Slides.		
PROGRAM-13		
Create a sheet to illustrate simple mathematical calculations using Google Sheets. Create student's internal mark statement and share the Google sheets via link.		4
Total Lecture Hours		30 Hours
Text Book(s)		
1	IanLamont,GoogleDrive&Docsin30Minutes,2 nd Edition.

Course Code		Applied Mathematics	L	T	P	C
Core/elective/Supportive		Allied:2	4	0	0	4
Pre-requisite		Basic Knowledge in Mathematics	Syllabus version		2025-26 Batch	
Course Objectives						
To introduce the concepts of Numbers, Quantification, sets, logical reasoning, probability and calculus						
Expected Course Outcomes						
1	Demonstrate the concepts of Numbers, Quantification, sets, logical reasoning, probability and calculus					K2
2	Apply the learned concepts to solve various mathematical problems related to the domain					K3
3	Apply various laws related to logarithms and sets to solve various mathematical problems					K4
4	Solve problems related to permutation, combinations, mathematical and logical reasoning and calculus.					K5
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	Numbers and Numerical Applications					15
Numbers, Quantification and Numerical Applications-Prime Numbers, Encryptions using Prime Numbers-Binary Numbers-Complex Numbers (Preliminary idea only)-Indices, Logarithm and Antilogarithm-Laws and properties of logarithms-Simple applications of logarithm and antilogarithm						
UNIT II	Algebra					16
Algebra - Sets- Types of sets-Venn diagram-De Morgan's laws-Problem solving using Venn diagram 4-Relations and types of relations-Introduction of Sequences, Series-Arithmetic and Geometric progression-Relationship between AM and GM						
UNIT III	Relations					16
Definition and properties of binary relations – Representing Relations – Closures of Relations – Composition of Relations – Equivalence Relations – Partitions and Covering of sets – Partial Orderings–n-array Relations and their applications.						
UNIT IV	Functions					14
Calculus - Introducing functions - Domain and Range of a function-Types of functions (Polynomial function; Rational function; Composite function; Logarithm function; Exponential function ; Modulus function; Greatest Integer function, Sig num function – Graphical representation of functions-Concept of limits and continuity of a function-Instantaneous rates of change-Differentiation as a process of finding derivative – Derivatives of algebraic functions using Chain rule –Tangent line and equations of tangents.						

UNIT V		Probability	14
Probability - Random experiment, sample space, events, mutually exclusive events - Independent and Dependent Events - Law of Total Probability - Bayes‘Theorem.			
Total Lecture Hours			75 Hours

Third Semester

Course Code		Python Programming	L	T	P	C
Core/elective/Supportive		Core:4	4	0	0	4
Pre-requisite		Knowledge in Basics of Object Oriented Programming	Syllabu		2023-26 Batch	
Course Objectives						
To introduce the concepts of the various programming constructs of Python programming						
Expected Course Outcomes						
1	Apply the various basic programming constructs like operators, expressions, decision making statements and Looping statements					K2
2	Summarize the concept of lists, tuples, functions and error handling					K2
3	Apply the concept of Decision making statements, looping constructs, functions for solving basic programs					K3
4	Analyze the concepts of Lists, tuples and error handling mechanisms					K4
5	Evaluate a program incorporating all the python language constructs					K5
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	BASICS					18
Python-Variables-Executing Python from the Command Line-Editing Python Files-Python Reserved Words- Basic Syntax-Comments-Standard Data Types-Relational Operators-Logical Operators-Bit Wise Operators-Simple Input and Output.						
UNIT II	CONTROL STATEMENTS, LISTS, TUPLES					18
CONTROL STATEMENTS: Control Flow and Syntax-Indenting-if Statement-statements and expressions-string operations-Boolean Expressions-while Loop-break and continue-for Loop. LISTS: List-list slices- list methods-list loop-mutability-aliasing-cloning lists-list parameters. TUPLES: Tuple assignment, tuple as return value-Sets-Dictionaries.						
UNIT III	FUNCTIONS:					17
Definition-Passing parameters to a Function-Built-in functions-Variable Number of Arguments-Scope-Type conversion-Type coercion-Passing Functions to a Function-Mapping Functions in a Dictionary-Lambda-Modules-Standard Modules-sys-math-time-dir-help Function.						
UNIT IV	ERROR HANDLING:					19
Run Time Errors-Exception Model-Exception Hierarchy-Handling Multiple Exceptions-Data Streams-Access Modes Writing-Data to a File Reading-Data From a File-Additional File Methods-Using Pipes as Data Streams-Handling IO Exceptions-Working with Directories.						
UNIT V	OBJECT ORIENTED FEATURES:					18
Classes Principles of Object Orientation - Creating Classes -Instance Methods - File Organization – Special Methods – Class Variables – Inheritance – Polymorphism – Type Identification –Simple Character Matches - Special Characters – Character Classes – Quantifiers - Dot Character –Greedy Matches – Grouping – Matching at Beginning or End-Match Objects-Substituting-Splitting a String-Compiling Regular Expressions.						
Total Lecture Hours						90Hours

Course Code		Python Programming Lab	L	T	P	C
Core/elective/Supportive		Core Lab:4	0	0	3	2
Pre-requisite		Knowledge in basic Programming	Syllabus		2023-26 Batch	
Course Objectives						
To introduce the concepts of python programming constructs of C++						
Expected Course Outcomes						
1	Apply the concept of Decision making statements, looping constructs, functions for solving basic programs					K3
2	Analyze the concepts of Lists, tuples and error handling mechanisms					K4
3	Evaluate a program incorporating all the python language constructs					K5
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
PROGRAM-1						
Write a python program that displays the following information: Your name, Full address Mobile number, College name, Course subjects.					5	
PROGRAM-2						
Write a python program to find the largest three integers using if-else and conditional operator.						
PROGRAM-3						
Write a python program that asks the user to enter a series of positive numbers (The user should Enter a negative number to signal the end of the series) and the program should display the numbers in order and their sum.						
PROGRAM-4						
Write a python program to find the product of two matrices[A]m _x p and[B]p _x r						
PROGRAM-5						
Write recursive functions for GCD of two integers.						
PROGRAM-6						
Write recursive functions for the factorial of positive integer.						
PROGRAM-7						
Write recursive functions for Fibonacci Sequence up to given number n.						
PROGRAM-8						
Write recursive functions to display prime number from 2 ton.						
PROGRAM-9						
Write a python program that write a series of random numbers to a file from1 ton and display.						
PROGRAM-10						
Write a python program to sort a given sequence: String, List and Tuple.						
PROGRAM-11						
Write a python program to make a simple calculator.						
PROGRAM-12						
Write a python program for Linear Search and Binary Search.						
Total Hours					75 Hours

Course Code		Fuzzy Logic and Neural Networks	L	T	P	C
Core/elective/Supportive		Core:5	4	0	0	4
Pre-requisite		Knowledge in Basics of Object Oriented Programming	Syllabus		2023-26 Batch	
Course Objectives						
- To introduce the concepts of neural networks and fuzzy systems - To explain the basic mathematical elements of the theory of fuzzy sets.						
1	Explain the basic concepts of fuzzy sets and fuzzy logic					K2
2	Understanding of the basic mathematical elements of the theory of fuzzy sets.					K2
3	Explain the fundamentals and history of neural networks					K2
4	Outline about the mapping and recurrent networks					K2
5	Analyze the applications of fuzzy logic and neural network for various applications					K3
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	Fuzzy Set Theory and Fuzzy Logic Control:					18
Basic concepts of fuzzy sets-Operations on fuzzy sets-Fuzzy relation equations-Fuzzy logic control Fuzzification–Defuzzification-Knowledge base-Decision making logic-Membership functions–Rule base.						
UNIT II	Adaptive Fuzzy Systems					18
Performance index – Modification of rule base 0 – Modification of membership functions-Simultaneous modification of rule base and membership functions – Genetic algorithms-Adaptive fuzzy system Neuro fuzzy systems.						
UNIT III	Artificial Neural Networks:					18
Introduction-History of neural networks-multilayer perceptions-Back propagation algorithm and its Variants-Different types of learning, examples.						
UNIT IV	Mapping and Recurrent Networks:					18
Counter propagation–Self organization Map-Cognitron and Neo cognitron – Hop field Net-Kohonnen Nets-Gross berg Nets-Art-I, Art-II reinforcement learning						
UNIT V	Case Studies					18
Application of fuzzy logic and neural networks to Measurement-Control-Adaptive Neural Controllers –Signal Processing and Image Processing

Course Code		Design and Analysis of Algorithms	L	T	P	C
Core/elective/Supportive		Allied:3	5	0	0	2
Pre-requisite		- Foundation in designing algorithms - Basic knowledge on data Structural concepts	Syllabus version		2023-26 Batch	
Course Objectives						
- To emphasize the importance of analysis of algorithms and finding the time complexity. - To explain various algorithm design techniques						
Expected Course Outcomes						
1	Explain the importance of algorithm analysis and the notation used					K2
2	Apply the various frame works for analyzing recursive and non-recursive algorithms to find the time complexity					K3
3	Illustrate the various algorithm design techniques like divide and conquer, greedy algorithms, brute force and dynamic programming					K4
4	Illustrate the various iterative method like Simplex Method, Maximum-Flow Problem, Maximum Matching in Bipartite Graphs, Stable marriage Problem.					K4
5	Compare the P,NP,NP– Complete and NP-Hard type of problems					K4
6	Compare algorithms by calculating their time efficiency using the prescribed framework					K5
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	INTRODUCTION					18
Notion of Algorithm–Fundamentals of Algorithmic Problem Solving–Important Problem types– Fundamentals of the Analysis of Algorithmic Efficiency–Asymptotic Notations and their properties. Analysis Framework – Empirical analysis – Mathematical analysis for Recursive and Non-recursive algorithms						
UNIT II	BRUTEFORCE AND DIVIDE-AND-CONQUER					18
Brute Force–Computing an–String Matching–Closest Pair and Convex-Hull Problems-Exhaustive Search–Travelling Salesman Problem–Knapsack Problem–Assignment problem. Divide And Conquer Methodology–Binary Search–Merge sort–Quick sort–Heap Sort-Multiplication of Large Integers–Closest-Pair and Convex–Hull Problems.						
UNIT III	DYNAMIC PROGRAMMING AND GREEDY TECHNIQUE					19
Dynamic programming – Principle of optimality–Coin changing problem, Computing a Binomial Coefficient– Floyd_s algorithm – Multi stage graph – Optimal Binary Search Trees –Knapsack Problem and Memory functions. Greedy Technique – Container loading problem–Prim_s algorithm and Kruskal’s Algorithm.						
UNIT IV	ITERATIVE IMPROVEMENT					17
The Simplex Method –The Maximum-Flow Problem –Maximum Matching in Bipartite Graphs, Stable marriage Problem.						

UNIT V		COPING WITH THE LIMITATIONS OF ALGORITHM POWER	18
Lower-Bound Arguments–P, NPNP-Complete and NP Hard Problems. Back tracking–n-Queen problem–Hamiltonian Circuit Problem–Subset Sum Problem. Branch and Bound–Assignment problem–Knapsack Problem–Travelling Salesman Problem–Approximation Algorithms for NP-Hard Problems–Travelling Salesman problem–Knapsack problem.

Course Code		Internet of Things(IoT)	L	T	P	C
Core/elective/Supportive		Skill based Subject:1	4	0	0	3
Pre-requisite		None	Syllabus version	2023-26 Batch		
Course Objectives						
- To explain about the definition and usage of Internet of things - To explain the key components of IoT system						
Expected Course Outcomes						
1	Explain the definition and usage of the term-Internet of Things in different contexts					K2
2	Understand the key components that make up an IoT system					K2
3	Differentiate between the levels of the IoT stack and be familiar with the key technologies and protocols employed a teach layer of the stack					K3
4	Apply the knowledge and skills acquired during the course to build and test a complete, working IoT system involving prototyping, programming and data analysis					K3
5	Discover where the IoT concept fits within the broader ICT industry and possible future trends					K4
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I Introduction to IoT 16						
Introduction–Definition and Characteristics of IoT, Physical Design of IoT; Things in IOT, Logical Design of IoT; IoT Functional Blocks, IoT Communication APIs, IoT Enabling Technologies; WSN, Cloud Computing, Big Data Analysis, Communication Protocols, Embedded Systems						
UNIT II IoT Hardware 15						
IoT Hardware, Devices and Platforms–Basics of Arduino Hardware, The Arduino IDE, Basic Arduino Programming, Basics of Raspberry pi; Introduction to Raspberry pi, Programming with Raspberry pi, CDAC IoT devices: Ubimote, Wi-Fi mote, BLEMote, WINGZ gateway, Introduction to IoT Platforms, IoT Sensors and actuators						
UNIT III IoT Protocols 16						
IoT Protocols–IoT Data link Protocols, Network Layer Routing Protocols, Network Layer Encapsulation Protocols, Session Layer Protocols, IoT Security Protocols, Service Discovery Protocols, Infrastructure Protocols.						
UNIT IV IoT Programming 14						
IoT Programming–Arduino Programming: Serial Communications–Getting Input from Sensors, Visual, Physical and Audio Outputs, Remotely Controlling External Devices, Wireless Communication, Programming with Raspberry pi: Basics of python Programming, Python Packages Of IoT, IoT Programming with CADAC IoT devices.						
UNIT V Domain Specific IoT 14						
Domain Specific IoT–Home automation, smart cities, Smart Environment, IoT in Energy, Logistics, Agriculture, industry and Health & Life style sensors, Case Studies: A Case Study of Internet of Things Using Wireless Sensor Networks and Smart Phones, Security Analysis of Internet-of-Things: A Case Study of August Smart Lock, Open IoT Platform.

Fourth Semester

Course Code		Artificial Intelligence and Knowledge Representation	L	T	P	C
Core/elective/Supportive		Core:6	4	0	0	4
Pre-requisite		None	Syllabus version		2023-26 Batch	
Course Objectives						
To expose the students the fundamental concepts of Artificial Intelligence and its applications.						
Expected Course Outcomes						
1	Demonstrate fundamental understanding of the history of artificial intelligence (AI) and its foundations.					K2
2	Understanding about the basic concepts of Software agents and representation of knowledge					K2
3	Demonstrate awareness and a fundamental understanding of various applications of AI techniques in intelligent agents, expert systems, artificial neural networks and other machine learning models.					K2
4	Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation, and learning.					K3
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I						
		Introduction				18
Introduction–Definition–Future of Artificial Intelligence–Characteristics of Intelligent Agents– Typical Intelligent Agents–Problem Solving Approach to Typical AI Problems.						
UNIT II		Problem Solving Methods				19
Problem Solving Methods–Search Strategies–Uninformed–Informed–Heuristics–Local Search Algorithms and Optimization Problems–Searching with Partial Observations–Constraint Satisfaction Problems–Constraint Propagation– Back tracking Search–Game Playing – Optimal Decisions in Games – Alpha – Beta Pruning – Stochastic Games.						
UNIT III		Knowledge Representation				18
Knowledge Representation–First Order Predicate Logic – Prolog Programming–Unification–Forward Chaining – Backward – Chaining – Resolution – Knowledge Representation – Onto logical Engineering–Categories and Objects–Events–Mental Events and Mental Objects–Reasoning Systems for Categories–Reasoning with Default Information.						
UNIT IV		Software Agents				17
Software Agents–Architecture for Intelligent Agents– Agent Communication–Negotiation and Bargaining–Argumentation among Agents–Trust and Reputation in Multi-agent Systems.						
UNIT V		AI Applications				18
AI Applications–Language Models–Information Retrieval–Information Extraction–Natural Language Processing–Machine Translation–Speech Recognition–Robot–Hardware–Perception –Planning–Moving.						
Total Lecture Hours						90Hours

Course Code		R Programming	L	T	P	C
Core/elective/Supportive		Core:7	4	0	0	3
Pre-requisite		None	Syllabus version		2023-26 Batch	
Course Objectives						
• To expose the students of the fundamental concepts of R Programming						
Expected Course Outcomes						
1	Understand the basics in R programming in terms of constructs, control statements, string functions					K2
2	Understand the use of R for Big Data analytics					K2
3	Apply R programming for Text processing					K3
4	Appreciate and apply the R programming from a statistical perspective					K3
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	Introducing to R					18
Introducing to R–R Data Structures–Help Functions in R–Vectors–Scalars–Declarations–Recycling–Common Vector Operations–Using all and any–Vectorized operations–NA and NULL values–Filtering–Victoriesed if-then else–Vector Element names.(9).						
UNIT II	Matrices					18
Creating matrices–Matrix Operations–Applying Functions to Matrix Rows and Columns–Adding and deleting rows and columns–Vector/Matrix Distinction– Avoiding Dimension Reduction–Higher Dimensional arrays–lists–Creating lists–General list operations–Accessing list components and values–applying functions to lists–recursive lists.						
UNIT III	Data Frames					18
Creating Data Frames–Matrix-like operations in frames–merging Data frames–Applying functions to Data Frames–Factors and Tables–Factors and levels–Common Functions used with factors–Working with tables–Other factors and table related functions–Control statements–Arithmetic and Boolean operators and values – Default Values for arguments – Returning Boolean Values–Functions are objects–Environment and scope issues–Writing Upstairs–Recursion–Replacement functions–Tools for Composing function code–Math and Simulation in R.						
UNIT IV	Classes					18
S3 Classes–S4 Classes–Managingyourobjects–Input/output–accessingkeyboardandmonitor–readingandwritingfiles–accessingtheinternet–StringManipulation–Graphics–CreatingGraphs–CustomizingGraphs–SavingGraphstofiles–CreatingThree-Dimensionalplots.						
UNITV	Interfacing R					18
Interfacing R to other languages–Parallel R–Basic Statistics–Linear Model–Generalized Linear models–Non-linear Models–Time Series and Auto-Correlation–Clustering.

Core/elective/Supportive		Core Lab:5	0	0	3	2
Pre-requisite		None	Syllabus version	2023-26 Batch		
Course Objectives						
• To expose the students of the fundamental concepts of R Programming						
Expected Course Outcomes						
1	Understand the basics in R programming in terms of constructs, control statements, string functions					K2
2	Understand the use of R for Big Data analytics					K2
3	Apply R programming for Text processing					K3
4	Appreciate and apply the R programming from a statistical perspective					K3
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
List of Programs						
1. R Expressions and Data Structures 2. Manipulation of vectors and matrix 3. Operators on Factors in R 4. Data Frames in R 5. Lists and Operators 6. Working with looping statements. 7. Graphs in R 8. 3D plots in R

Course Code		Machine Learning- Basics	L	T	P	C
Core/elective/Supportive		Allied:4	4	0	0	2
Pre-requisite		None	Syllabus version		2023-26 Batch	
Course Objectives						
To explain about the basics of machine learning						
Expected Course Outcomes						
1	Understanding of the fundamental issues and challenges of machine learning: data, model selection, model complexity, etc.					K2
2	Understanding of the strengths and weaknesses of many popular machine learning approaches.					K2
3	Explain about the concepts of computational learning theory and dimensionality reduction					K2
4	Appreciate the underlying mathematical relationships within and across Machine Learning algorithms and the paradigms of supervised and un-supervised learning.					K3
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	Introduction to Learning					18
Algorithmic models of learning, Learning classifiers, functions, relations, grammars, probabilistic models, value functions, behaviors and programs for experience. Bayesian, maximum some posterior, and minimum description length frameworks.						
UNIT II	ML-Models					18
Parameter Estimation, sufficient statistics, decision trees, neural networks, support vector machines, Bayesian networks, bag of words classifiers, N-gram models; Markov and Hidden Markov models, probabilistic relational models, association rules, nearest neighbor classifiers, locally weighted regression, ensemble classifiers.						
UNIT III	Computational Learning					17
Computational Learning theory, mistake bound analysis, sample complexity analysis, VC dimension, Occam learning, accuracy and confidence boosting, Dimensionality reduction: Principal component Analysis, feature selection and visualization.						
UNIT IV	Unsupervised Learning					18
Unsupervised Learning: Clustering, mixture models, k-means clustering, hierarchical clustering, distributional clustering, Reinforcement learning; Learning from heterogeneous, distributed, data and knowledge.						
UNIT V	Applications in Data Mining					19
Selected applications in data mining, automated knowledge acquisition, pattern recognition, program synthesis, text and language processing, internet-based information systems, human computer interaction, semantic web, and Bio informatics and computational biology.						
Total Lecture Hours						90Hours

Course Code		Capstone Project Work	L	T	P	C
Core/elective/Supportive		Skill Based Subject 2	0	0	3	2
Pre-requisite		- Students should have a good understanding of software engineering - Student should possess strong analytical skills - Strong coding skills in any one programming paper	Syllabus version		2023-26 Batch	
Course Objectives						
- To understand and select the task based on their core skills. - To get the knowledge about analytical skill for solving the selected task. - To get confidence for implementing the task and solving the real time problems.						
Expected Course Outcomes						
On the successful completion of the course, student will be able to:						
1	Illustrate a real world problem and identify the list of project requirements					K3
2	Judge the features of the project including forms, data bases and reports					K5
2	Design code to meet the input requirements and to achieve the required output					K6
3	Compose a project report incorporating the features of the project					K6
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
Aim of the project work						
1. The aim of the project work is to acquire practical knowledge on the implementation of the programming concepts studied. 2. Each student should carry out individually one project work and it may be a work using the software packages that they have learned or the implementation of concepts from the papers studied or implementation of any innovative idea focusing on application oriented concepts. 3. The project work should be compulsorily done in the college only under the supervision of the department staff concerned.						
Viva Voce						
1. Viva-Voce will be conducted at the end of the year by both Internal (Respective Guides) and External Examiners, after duly verifying the Annexure Report available in the College, for a total of 50 marks at the last day of the practical session. 2. Out of 50 marks, 20 marks for CIA and 30 for CEE (20 for evaluation and for project report and 10 Marks for Viva-voce).

Course code		INTERNSHIP TRAINING	L	T	P	C
Core/Elective/Supportive			0	0	0	2
Pre-requisite		Basic knowledge in SDLC and managing of software projects	Syllabus Version	2025-26 onwards		
Course Objectives:						
The main objectives of this course are to: 1. To gain knowledge in software development environment 2. To know about the managerial aspects of development are. 3. Student is given interns about the industry, the job and the company						

INTERNSHIP TRAINING
(During the vacation of Fourth Semester and viva voce examination to be conducted during practical examinations of fifth semester)

1. The aim of the Internship Training is to acquire practical knowledge on the implementation of the programming concepts studied.
2. To observe orientation to the company, its structure, and its products/services.
3. Direct engagement with assigned tasks and projects under the supervision of a mentor.
4. **Reporting and Evaluation:** Regular submission of progress reports and feedback sessions.
5. **Final Report and Presentation:** Completion of a final report summarizing the internship experience and potentially a presentation to showcase their work.

Viva Voce

1. Viva-Voce will be conducted at the end of the Fifth semester by both Internal (Respective Guides) and External Examiners, after duly verifying the training report in the college, for a total of 75 marks [CIA : 30 Marks and CEE : 45 Marks]
2. External Mark Split up (45 marks) :
 - ▶ Internship Training Report 25 marks
 - ▶ Viva PPT Presentation 10 marks
 - ▶ Viva Voce 10 Marks

Fifth Semester

Course Code		Machine Learning Techniques	L	T	P	C
Core/elective/Supportive		Core:8	6	0	0	4
Pre-requisite		None	Syllabus version		2023-26 Batch	
Course Objectives						
To introduce students to the concepts and techniques of Machine Learning.						
Expected Course Outcomes						
1	Understand the basic concepts and techniques of Machine Learning.					K2
2	Explain the regression methods, classification methods, clustering methods.					K2
3	Understand the inference and learning algorithms for the hidden Markov model.					K2
4	Demonstrate Dimensionality reduction Techniques					K2
5	Appreciate the underlying mathematical relationships within and across Machine Learning algorithms and the paradigms of supervised and un-supervised learning.					K3
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	Introduction to Machine Learning					18
Introduction – Types of Machine Learning – Supervised Learning – The Brain and the Neuron – Design a Learning System – Perspectives and Issues in Machine Learning – Concept Learning Task – Concept Learning as Search – Finding a Maximally Specific Hypothesis –Version Spaces and the Candidate Elimination Algorithm–Linear Discriminants–Perceptron–Linear Separability – Linear Regression.						
UNIT II	Machine Learning Models					19
Linear Models–Multi-Layer Perceptron–Going Forwards–Going Backwards: Back Propagation Error – Multi-Layer Perceptron in Practice – Examples of using the MLP–Overview–Deriving Back-Propagation–Radial Basis Functions and Splines–Concepts–RBF Network–Curse of Dimensionality– Interpolations and Basis Functions–Support Vector Machines.						
UNIT III	Tree & Probabilistic Model					19
Tree and Probabilistic Models–Learning with Trees–Decision Trees–Constructing Decision Trees – Classification and Regression Trees – Ensemble Learning – Boosting – Bagging – Different ways to Combine Classifiers – Probability and Learning – Data into Probabilities–Basic Statistics–GaussianMixtureModels–NearestNeighborMethods–UnsupervisedLearning–Kmeans Algorithms–Vector Quantization–Self Organizing Feature Map.						
UNIT IV	Dimensionality Reduction and Evolutionary Models					17
Dimensionality Reduction and Evolutionary Models-Dimensionality Reduction–Linear Discriminant Analysis–Locally Linear Embedding–Iso map–Least Squares Optimization–Evolutionary Learning–Genetic Algorithms–Genetic Offspring–Genetic Operators– Using Genetic Algorithms–Reinforcements Learning–Overview–Getting Lost Example–Markov Decision Process.						
UNIT V	Graphical Model					17
Graphical Models – Markov Chain Monte Carlo Methods– Sampling – Proposal Distribution –Markov Chain Monte Carlo – Graphical Models – Bayesian Networks – Markov Random Fields–Hidden Markov Models–Tracking Methods.

Course Code		Machine Learning Lab	L	T	P	C
Core/elective/Supportive		Core Lab:6	0	0	6	4
Pre-requisite		None	Syllabus version	2023-26 Batch		
Course Objectives						
• To introduce students to the concepts and techniques of Machine Learning.						
Expected Course Outcomes						
1	Understand the basic concepts and techniques of Machine Learning.					K2
2	Explain the regression methods, classification methods, clustering methods.					K2
3	Understand the inference and learning algorithms for the hidden Markov model.					K2
4	Demonstrate Dimensionality reduction Techniques					K2
5	Appreciate the underlying mathematical relationships within and across Machine Learning algorithms and the paradigms of supervised and un-supervised learning.					K3
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
List of Programs						
1. Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file						
2. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples						
3. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.						
4. Build an Artificial Neural Network by implementing the Back propagation algorithm and test the same using appropriated at a sets.						
5. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test datasets.						
6. Assuming a set of documents that need to be classified, use the naïve Bayesian Classifier model to perform this task. Built-in Java classes / API can be used to write the program. Calculate the accuracy, precision, and recall for your data set.

Course Code		Business Data Analytics	L	T	P	C
Core/elective/Supportive		Elective: I	6	0	0	4
Pre-requisite		None	Syllabu		2023-26	
Course Objectives					Batch	
• To introduce the fundamental concepts of Business data analytics and associated methodologies						
Expected Course Outcomes						
1	Understand and critically apply the concepts and methods of business analytics					K2
2	Demonstration the various methodologies of descriptive statistics					K2
3	Understanding of modeling uncertainty and statistical inference					K2
4	Understanding of analytical frameworks					K2
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	OVERVIEW OF BUSINESS ANALYTICS					18
Introduction – Drivers for Business Analytics – Applications of Business Analytics: Marketing and Sales, Human Resource, Healthcare, Product Design, Service Design, Customer Service and Support– Skills Required for a Business Analyst–Framework for Business Analytics Life Cycle for Business Analytics Process.						
UNIT II	ESSENTIALS OF BUSINESS ANALYTICS					17
Descriptive Statistics–Using Data–Types of Data–Data Distribution Metrics: Frequency, Mean, Median, Mode, Range, Variance, Standard Deviation, Percentile, Quartile, z-Score, Covariance, Correlation– Data Visualization: Tables,Charts,Line Charts,Bar and Column Chart,Bubble Chart, Heat Map–Data Dashboards.						
UNIT III	MODELING UNCERTAINTY AND STATISTICAL INFERENCE					19
Modeling Uncertainty: Events and Probabilities – Conditional Probability – Random Variables – Discrete Probability Distributions – Continuous Probability Distribution–Statistical Inference: Data Sampling–Selecting a Sample–Point Estimation–Sampling Distributions–Interval Estimation–Hypothesis Testing.						
UNIT IV	ANALYTICS USING HADOOP AND MAP REDUCE FRAMEWORK					19
Introducing Hadoop– RDBMS versus Hadoop –Hadoop Overview–HDFS(Hadoop Distributed File System)–Processing Data with Hadoop–Introduction to Map Reduce–Features of Map Reduce– Algorithms Using Map-Reduce:Matrix- Vector Multiplication, Relational Algebra Operations, Grouping and Aggregation–Extensions to Map Reduce.						
UNIT V	OTHER DATA ANALYTICAL FRAMEWORKS					17
Overview of Application development Languages for Hadoop – Pig Latin – Hive – Hive Query Language (HQL) – Introduction to Pentaho, JAQL–Introduction to Apache: Sqoop, Drill and Spark, Cloud era Impala–Introduction to No SQL Databases– H base and Mongo DB.

Course Code		Social Network Analysis	L	T	P	C
Core/elective/Supportive		Elective: I	6	0	0	4
Pre-requisite		None	Syllabus		2023-26	
Course Objectives					Batch	
To explain the methodologies used in social network analysis						
Expected Course Outcomes						
1	Understand a broad range of network concepts and theories.					K2
2	Appreciate how network analysis can contribute to increasing knowledge about diverse aspects of society.					K2
3	Use a relational approach to answer questions of interest to them (i.e. be able to apply 'network thinking').					K3
4	Analyse social network data using various software packages.					K3
5	Present results from social network analysis, both orally and in writing.					K5
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	CLUSTERING AND CLASSIFICATION					17
Supervised Learning–Decision tree–Naïve Bayesian Text Classification–Support Vector Machines - Ensemble of Classifiers – Unsupervised Learning – K-means Clustering – Hierarchical Clustering – Partially Supervised Learning–Markov Models –Probability-Based Clustering–Vector Space Model						
UNIT II	SOCIAL MEDIA MINING					17
Data Mining Essentials–Data Mining Algorithms–Web Content Mining–Latent semantic Indexing–Automatic Topic Extraction–Opinion Mining and Sentiment Analysis–Document Sentiment Classification						
UNIT III	EXTRACTION AND MINING COMMUNITIES IN WEB SOCIAL NETWORKS					18
Extracting evolution of Web Community from a Series of Web Archive–Detecting Communities in Social Networks–Definition of Community–Evaluating Communities–Methods for Community Detection & Mining–Applications of Community Mining Algorithms–Tools for Detecting Communities–Social Network Infrastructure and Communities–Decentralized Online Social Networks–Multi-Relational Characterization of Dynamic Social Network Communities						
UNIT IV	HUMAN BEHAVIOR ANALYSIS AND PRIVACY ISSUES					19
Understanding and Predicting Human Behavior for Social Communities – Use Data Management, Inference and Distribution–Enabling New Human Experiences–Reality Mining–Context Awareness–Privacy in Online Social Networks–Trust in Online Environment–Trust Models Based on Subjective Logic–Trust Network Analysis–Trust Transitivity Analysis– Combining Trust and Reputation–Trust Derivation Based on Trust Comparisons–Attack Spectrum and Counter measures.						
UNIT V	VISUALIZATION AND APPLICATIONS OF SOCIAL NETWORKS					19
Graph Theory–Centrality–Clustering–Node-Edge Diagrams–Matrix representation–Visualizing Online Social Networks–Visualizing Social Networks with Matrix-Based Representations –Node-Link Diagrams–Hybrid Representations–Applications–Covert Networks–Community Welfare–Collaboration Networks–Co-Citation Networks–Recommendation in Social Media: Challenges– Classical Recommendation Algorithms–Recommendation Using Social Context–						

Evaluating Recommendations.

Course Code		Software Agents	L	T	P	C
Core/elective/Supportive		Elective: I	6	0	0	4
Pre-requisite		None	Syllabus		2023-26	
Course Objectives					Batch	
- To explain the fundamentals of agents and agent programming paradigms. - To explain about agents and security						
Expected Course Outcomes						
1	Understanding the fundamentals of agents and agent programming paradigms.					K2
2	Discussing the basics of java agents.					K2
3	Learning the concepts of multivalent systems.					K2
4	Understanding the concepts of intelligent software agents.					K2
5	Understanding the agents and security.					K2
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	AGENTS–OVERVIEW					16
UNIT I Agent Definition–Agent Programming Paradigms–Agent Vs Object–Aglet–Mobile Agents–Agent Frameworks–Agent Reasoning						
UNIT II	JAVA AGENTS					17
UNIT II Processes–Threads–Daemons–Components–Java Beans–Active X–Sockets–RPCs–Distributed Computing–Aglets Programming–Jini Architecture–Actors and Agents–Typed and Proactive Messages						
UNIT III	MULTI AGENT SYSTEMS					19
Interaction between Agents–Reactive Agents–Cognitive Agents–Interaction Protocols–Agent Coordination–Agent negotiation–Agent Cooperation–Agent Organization–Self - Interested Agents in Electronic Commerce Applications						
UNIT IV	INTELLIGENT SOFTWARE AGENTS					19
Interface Agents–Agent Communication Languages–Agent Knowledge Representation–Agent Adaptability–Belief Desire Intension–Mobile Agent Applications						
UNIT V	AGENTS AND SECURITY					19
Agent Security Issues–Mobile Agents Security–Protecting Agents against Malicious Hosts–Untrusted Agent–Black Box Security–Authentication for Agents–Security Issues for Aglets						
Total Lecture Hours					90 Hours

Course Code		Ethical Hacking	L	T	P	C
Core/elective/Supportive		Skill Based Subject: 3	6	0	0	3
Pre-requisite		None	Syllabus		2023-26	Batch
Course Objectives						
- To introduce the concepts of security and carious kinds of attacks - To explain about system hacking and penetration testing						
Expected Course Outcomes						
1	Explain the importance of security and various types of attacks					K2
2	Understand the concepts of scanning and system hacking					K2
3	Explain about penetration testing and its methodology					K2
4	Identify the various programming languages used by security professional					K4
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	Introduction To Hacking					18
Introduction to Hacking – Importance of Security – Elements of Security – Phases of an Attack – Types of Hacker Attacks – Hacktivism – Vulnerability Research – Introduction to Foot printing – Information Gathering Methodology–Foot printing Tools–WHO IS Tools–DNS Information Tools–Locating the Network Range–Meta Search Engines.						
UNIT II	Scanning And Enumeration					18
Introduction to Scanning–Objectives–Scanning Methodology–Tools–Introduction to Enumeration–Enumeration Techniques–Enumeration Procedure–Tools.						
UNIT III	System Hacking					18
Introduction–Cracking Passwords–Password Cracking Websites–Password Guessing–Password Cracking Tools–Password Cracking Counter measures–Escalating Privileges–Executing Applications–Key loggers and Spyware.						
UNIT IV	Programming For Security Professionals					18
Programming Fundamentals–C language–HTML–Perl–Windows OS Vulnerabilities–Tools for Identifying Vulnerabilities – Counter measures – Linux OS Vulnerabilities – Tools For Identifying Vulnerabilities–Counter measures						
UNIT V	Penetration Testing					18
Introduction–Security Assessments–Types of Penetration Testing–Phases of Penetration Testing–Tools–Choosing Different Types of Pen-Test Tools–Penetration Testing Tools.						
Total Lecture Hours						90Hours

**Sixth
Semester**

Course Code		Natural Language Processing	L	T	P	C
Core/elective/Supportive		Core: 10	5	0	0	4
Pre-requisite		None	Syllabus		2023-26	
Course Objectives					Batch	
To introduce the fundamental concepts and techniques of natural language processing(NLP)						
Expected Course Outcomes						
1	Understand the fundamental concepts and techniques of natural language processing (NLP)					K2
2	Understanding of the models and algorithms in the field of NLP.					K2
3	Demonstrate the computational properties of natural languages and the commonly used algorithms for processing linguistic information.					K2
4	Understanding semantics and pragmatics of languages for processing					K2
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I		Introduction to NLP				13
Introduction: application of NLP techniques and key issues-MT grammar checkers-dictation-document generation- NL interfaces- Natural language processing key issues- the different analysis level used for NLP: morpho-lexical-syntactic-semantic-pragmatic-markup(TEI,UNICODE)- finite State automata-Recursive and augmented transition networks-open problems						
UNIT II		Lexical Level				14
Lexical level: error tolerant lexical processing (spelling error correction)-transducers for the design of morphologic analyzers features-towards syntax: part-of-speech tagging (BRILL, HMM)-efficient Representations for linguistic resources (lexica, grammars,...)tries and finite state automata.						
UNIT III		Syntactic Level				16
Syntactic level: grammars(eg. Formal / Chomsky hierarchy, DCSGs, systematic case, unification, stochastic) -parsing(top-down,bottomup,char(early algorithm), CYKalgorithm)-automated estimation of probabilistic model parameters (inside-outside algorithm)-data oriented parsing- grammar formalisms and tree banks-efficient parsing for context-free grammars(CFGs)-statistical Parsing and probabilistic CFGs(PCFGs)-lexicilized PCFGse.						
UNIT IV		Semantic Level				15
Semantic level: logical forms-ambiguity resolution-semantic network and parsers-procedural semantics-montague semantics-vector space approaches-distributional semantics-lexical semantics and word sense disambiguation-compositional semantics semantic Role labeling and semantic parsing						
UNIT V		Pragmatic Level				17
Pragmatic level: knowledge representation-reasoning- plan/goal recognition-speech acts/intentions –belief models-discourse-reference. Natural language generation: content determination-sentence planning-surface realization, subjectivity and sentiment analysis: information extraction-automatic summarization-information retrieval and question answering-name identity recognition and relation extraction- IE using sequence labeling-machine translation: basic issues in MT-Statistical translation-word alignment-phrase-based translation and synchronous grammars.

Course Code		Project Work Lab	L	T	P	C
Core/Elective/Supportive		Core-11	0	0	5	4
Pre-requisite		Students should have the strong knowledge in any One of the programming languages in this course.	Syllabus version		2023-26 Batch	
Course Objectives						
- To understand and select the task based on their core skills. - To get the knowledge about analytical skill for solving the selected task. - To get confidence for implementing the task and solving the real time problems. - Express technical and behavioral ideas and thought in oral settings. - Prepare and conduct oral presentations						
Expected Course Outcomes						
On the successful completion of the course, student will be able to:						
1	Formulate a real world problem and develop its requirements develop a design solution for a set of requirements					K3
2	Test and validate the conformance of the developed prototype against the original requirements of the problem					K5
3	Work as a responsible member and possibly a leader of a team in developing software solutions					K3
4	Express technical ideas, strategies and methodologies in written form. Self-learn New tools, algorithms and techniques that contribute to the software solution of the project					K1-K4
5	Generate alternative solutions, compare them and select the optimum one					K6
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
Aim of the project work						
1. The aim of the project work is to acquire practical knowledge on the implementation of the programming concepts studied. 2. Each student should carry out individually one project work and it may be a work using the software packages that they have learned or the implementation of concepts from the papers studied or implementation of any innovative idea focusing on application oriented concepts. 3. The project work should be compulsorily done in the college only under the supervision of the department staff concerned.						
Viva Voce						
1. Viva-Voce will be conducted at the end of the year by both Internal (Respective Guides) and External Examiners, after duly verifying the Annexure Report available in the College, for a total of 100 marks at the last day of the practical session. 2. Out of 100 marks, 25 marks for CIA and 75 for CEE (50 evaluation of project report + 25 Viva Voce).

Course Code		Artificial Neural Network and Fuzzy Systems	L	T	P	C
Core/elective/Supportive		Elective: II	5	0	0	4
Pre-requisite		None	Syllabus		2023-26 Batch	
Course Objectives						
- To introduce the concepts of artificial neural networks and fuzzy systems - To explain the basic mathematical elements of the theory of fuzzy sets.						
Expected Course Outcomes						
1	Explain the concepts of neural networks and, fuzzy logic					K2
2	Understanding of the basic mathematical elements of the theory of fuzzy sets.					K2
3	Understanding the differences and similarities between fuzzy sets and classical sets theories					K2
4	Solve problems that are appropriately solved by neural networks and fuzzy logic					K3
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	Introduction					14
Basic concepts-single layer perceptron-Multilayer perceptron-Adaline-Madaline-Learning rules-Supervised learning-Back propagation networks-Training algorithm, Advanced algorithms-Adaptive network-Radial basis network modular network-Applications						
UNIT II	Learning					16
Introduction-unsupervised learning-Competitive learning networks-Kohonen self organizing networks-Learning vector quantisation- Hebbian learning-Hopfield network-Content address able nature, Binary Hopfield network, Continuous Hopfield network Travelling Salesperson problem-Adaptive resonance theory-Bidirectional Associative Memory-Principle component Analysis						
UNIT III	Fuzzy Sets					16
Introduction-crisp sets an overview-the notion of fuzzy sets-Basic concepts of fuzzy sets-classical logic an overview-Fuzzy logic. Operations on fuzzy sets-fuzzy complement-fuzzy union – fuzzy intersection-combinations of operations-general aggregation operations						
UNIT IV	Relations					14
Crisp and fuzzy relations-binary relations-binary relations on a single set-equivalence and similarity relations-Compatibility or tolerance relations-orderings-Membership functions-methods of generation – defuzzification methods						
UNIT V	Tree Learning					15
Adaptive Neuro Fuzzy based inference systems-classification and regression trees: decision tress, Cart algorithm – Data clustering algorithms: K means clustering, Fuzzy C means clustering, Mountain clustering, Subtractive clustering – rule base structure identification – Neuro fuzzy control: Feedback Control Systems, Expert Control, Inverse Learning, Specialized Learning, Back propagation through Real-Time Recurrent Learning.

Course Code		Web Application Security	L	T	P	C
Core/elective/Supportive		Elective: II	5	0	0	4
Pre-requisite		None	Syllabus		2023-26 Batch	
Course Objectives						
- To introduce the concepts of security in web applications - To explain about crime prevention and routine duties in a police station						
Expected Course Outcomes						
1	Illustrate about the concept of HTML, DHTML, CSS and Java Script					K2
2	Explain the history, characteristics, technologies, concepts, usage in web 2.0 and web 3.0					K2
3	Apply the core concepts of web applications to create web pages					K3
4	Apply the concepts of servers side programming					K3
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	Introduction to Web					14
Data with URL-HTML-DHTML: Cascading Style Sheets, Common Gateway Interface: Programming CGI! Scripts-HTML Forms:- Custom Database Query Scripts-Server Side Includes-Server_security issues.						
UNIT II	X HTML					13
X HTML: Introduction, CSS-Scripting languages-Java Script: Control statements, Functions, Arrays, Objects-DOM- Ajax enable rich internet applications.						
UNIT III	Server Side Programming					15
Server side Programming-Active server pages-Java server pages-Java Servlets: Servlet container-Exceptions- Sessions and Session Tracking_-Using Servlet context-Dynamic Content Generation- Servlet Chaining and Communications.						
UNIT IV	HTML 5					16
HTML review, Feature detection, The HTML 5 new Elements, Canvas, Video and audio, Web storage, Geo location, Offline Web pages, Micro data, HTML 5 APLS, Migrating from HTML 4 to HTML5, CSS 3.						
UNIT V	WEB 2.0					17
WEB 2.0- HISTORY, characteristics, technologies, concepts, usage, web 2.0 in education, philanthropy, social work. Web 3.0-Theory-and history understanding. Basic web artifacts and applications, implementation. MS share point -Share point 2013 overview, share (Put social to work, Share your stuff, Take share point on the go), Discover (find experts, discover answers, find what you are looking for), Manage(cost, risk, time)

Course Code		Fundamentals of Robotics	L	T	P	C
Core/elective/Supportive		Elective: II	5	0	0	4
Pre-requisite		None	Syllabus		2023-26 Batch	
Course Objectives						
• To introduce the basic concepts of robotics and its characteristics						
Expected Course Outcomes						
1	Describe the different physical forms of robot architectures.					K2
2	Explain about the actuators and characteristics of actuating system					K2
3	Demonstrate to mathematically describe a kinematic robot system.					K2
4	Analyze manipulation and navigation problems using knowledge of coordinate frames, kinematics, optimization, control, and uncertainty.					K3
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	Introduction to Robotics					14
Introduction to Robotics: Classification, Components, Characteristics, Applications.						
UNIT II	Robotics Kinematics					16
Robotics Kinematics: Position Analysis, Robots as Mechanisms, Matrix Representation, Transformation Matrices, Forward and Inverse Kinematics.						
UNIT III	Actuators					15
Actuators: Characteristics of Actuating Systems, Actuating Devices and Control.						
UNIT IV	Sensors					16
Sensors: Sensor Characteristics, Description of Different Sensors. Dynamic characteristics- Speed of motion, load carrying capacity & speed of response-Sensors-Internal sensors: Position sensors, & Velocity sensors, External sensors: Proximity sensors, Tactile Sensors, & Force or Torque sensors.						
UNIT V	Kinematics					14
Kinematics-Manipulators Kinematics, Rotation Matrix, Homogenous Transformation Matrix, D-H transformation matrix, D-H method of assignment of frames. Direct and Inverse Kinematics for industrial robots. Differential Kinematics for planar serial robots

Course Code		Embedded Systems	L	T	P	C
Core/elective/Supportive		Elective: III	5	0	0	4
Pre-requisite		None	Syllabus	2023-26 Batch		
Course Objectives						
• To introduce the concepts of embedded systems and its architecture						
Expected Course Outcomes						
1	Understand hardware and software design requirements of embedded systems.					K2
2	Explain about the architecture of microprocessor and operating systems in embedded systems					K2
3	Analyze the embedded systems ‘specification and develop software programs.					K4
4	Evaluate the requirements of programming Embedded Systems, related software architectures and tool chain for Embedded Systems.					K5
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	Introduction to Embedded System					15
Examples of Embedded Systems–Typical Hardware–Memory–Microprocessors–Busses–Direct Memory Access–Introduction to 8051 Microcontroller–Architecture–Instruction set–Programming.						
UNIT II	Microprocessor					16
Microprocessor Architecture–Interrupt Basics–The Shared-Data problem–Interrupt Latency–Round–Robin Architecture–Round–Robin with Interrupts Architecture–Function–Queue Scheduling Architecture –Real-Time Operating Systems Architecture–Selection of Architecture.						
UNIT III	Semaphores					14
Tasks and Task States–Tasks and Data–Semaphores and Shared Data–Semaphore Problems–Semaphore variants.						
UNIT IV	Message Queues & RTOS					15
Message Queues–Mail boxes–Pipes–Timer Functions–Events–Memory Management–Interrupt Routines in RTOS Environment. RTOS design–Principles–Encapsulation Semaphores and Queues–Hard Real-Time Scheduling Considerations–Saving Memory Space–Saving Power.						
UNIT V	Host machine & Testing					15
Host and Target Machines–Linker/Locator for Embedded Software–Getting Embedded Software into the Target System. Testing on your Host Machine–Instruction Set Simulators–Laboratory Tools used for Debugging.

Course Code		Principles of Secure Coding	L	T	P	C
Core/elective/Supportive		Elective: III	5	0	0	4
Pre-requisite		None	Syllabus		2023-26 Batch	
Course Objectives						
- To understand the secure software development life cycle - To explain about the secure coding techniques						
Expected Course Outcomes						
1	Explain about the secure software development lifecycle					K2
2	Understand the secure coding techniques					K2
3	Demonstrate the threat modeling process and benefits					K2
4	Explain about the database and web specific issues					K2
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	Introduction to Security					15
Need for secure systems: Proactive Security development process, Secure Software Development Cycle(S-SDLC), Security issues while writing SRS, Design phase security, Development Phase, Test Phase, Maintenance Phase, Writing Secure Code- Best Practices SD3 (Secure by design, default and deployment), Security principles and Secure Product Development Timeline						
UNIT II	Threat modeling process and its benefits					14
Threat modeling process and its benefits: Identifying the Threats by Using Attack Trees and rating threats using DREAD, Risk Mitigation Techniques and Security Best Practices. Security techniques, authentication, authorization. Defense in Depth and Principle of Least Privilege.						
UNIT III	Secure Coding Techniques					16
Secure Coding Techniques: Protection against DoS attacks, Application Failure Attacks, CPU Starvation Attacks, In secure Coding Practices In Java Technology. ARP Spoofing and its counter measures. Buffer Over run-Stack over run, Heap Over run, Array Indexing Errors, Format String Bugs. Security Issues in C Language: String Handling, Avoiding Integer Over flows and Under flows and Type Conversion Issues- Memory Management Issues, Code Injection Attacks, Canary based counter measures using Stack Guard and Pro police. Socket Security, Avoiding Server Hijacking, Securing RPC.						
UNIT IV	Database and Web-specific issues					16
Database and Web-specific issues: SOL Injection Techniques and Remedies, Race conditions, Time of Check Versus Time of Use and its protection mechanisms. Validating Input and Inter process Communication, Securing Signal Handlers and File Operations. XSS scripting attack and its types- Persistent and Non persistent attack XSS Counter measures and By passing the XSS Filters.						
UNIT V	Testing Secure Applications					14
Testing Secure Applications: Security code overview, secure software installation. The Role of the Security Tester, Building the Security Test Plan. Testing HTTP- Based Applications, Testing File-Based Applications, Testing Clients with Rogue Servers						
Total Lecture Hours					75 Hours

Course Code		Open Source Software	L	T	P	C
Core/elective/Supportive		Elective: III	5	0	0	4
Pre-requisite		None	Syllabus		2023-26	
Course Objectives					Batch	
- To explain the need and importance of open source software - To introduce the various open source software's like Linux, MySQL, PHP and Python						
Expected Course Outcomes						
1	Explain about the need and importance of open source software					K2
2	Demonstrate the concepts of open source software's					K2
3	Apply the programming constructs of My SQL, PHP, Python and PERL to create programs					K3
4	Develop small programs using open source software's					K3
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
UNIT I	Introduction to open sources					15
Introduction to open sources–Need of open sources–advantages of open sources–application of open sources. Open source operating systems: LINUX: Introduction–general overview–Kernel mode And user mode–process–advanced concepts–scheduling–personalities–cloning–signals–development with Linux.						
UNIT II	My SQL					15
My SQL: Introduction–setting up account–starting, terminating and writing your own SQL programs–Record selection Technology– working with strings–Date and Time– sorting Query results– generating summary–working with meta data–using sequences–My SQL and Web.						
UNIT III	PHP					16
PHP: Introduction–programming in web environment–variables–constants–data types–operators–statements–functions–arrays–OOP–string manipulations and regular expression–file Handling and data storage–PHP and SQL database–PHP and LDAP–PHP connectivity–sending and receiving E-mails–debugging and error handling–security–templates						
UNIT IV	Python					15
Syntax and style–python objects–numbers–sequences–strings–lists and tuples–dictionaries–conditional loops–files–input and output–errors and exceptions–functions–modules–classes and OOP–Execution environment						
UNIT V	Pearl					14
Pearl back grounder–pearl overview–pearl parsing rules–variables and data–statements and control structures–sub routines-, packages and modules–working with files–data manipulation.						
Total Lecture Hours					75 Hours

Course Code		Capstone Project Work Phase II	L	T	P	C
Core/elective/Supportive		Skill Based Subject: 4	0	0	3	2
Pre-requisite		- Students should have completed Capstone Project Work Phase-I - Strong coding skills in any one programming paper	Syllabus version		2023-26 Batch	
Course Objectives						
- To understand and select the task based on their core skills. - To get the knowledge about analytical skill for solving the selected task. - To get confidence for implementing the task and solving the real time problems.						
Expected Course Outcomes						
On the successful completion of the course, student will be able to:						
1	Select appropriate input, output, form and table design					K3
2	Design code to meet the input requirements and to achieve the required output					K6
3	Compose a project report in incorporating the features of the project					K6
K1 – Remember K2 – Understand K3 – apply K4 - Analyze K5 – evaluate K6 - Create						
Aim of the project work						
1. The aim of the project work is to acquire practical knowledge on the implementation of the programming concepts studied. 2. Each student should carry out individually one project work and it may be a work using the software packages that they have learned or the implementation of concepts from the papers studied or implementation of any innovative idea focusing on application oriented concepts. 3. The project work should be compulsorily done in the college only under the supervision of the department staff concerned.						
Viva Voce						
1. Viva-Voce will be conducted at the end of the year by both Internal (Respective Guides) and External Examiners, after duly verifying the Annexure Report available in the College, for a total of 50 marks at the last day of the practical session. 2. Out of 50 marks, 20 marks for CIA and 30 for CEE (20 for evaluation and for project report and 10 Marks for Viva-voce).
